

While the name “YOFC” may seem relatively new to North America, YOFC is by some measures the **largest maker of fibre optics in the world**. YOFC provides raw glass fibre spools, cable manufacturing equipment and even full cable products to many OEM’s under well-known brand names.

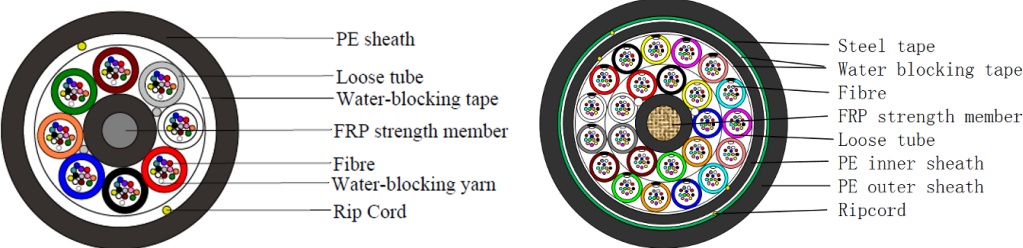

YOFC’s success and rapid growth is due to its relentless pursuit of innovation and quality in the area of optical fibre and fibre cable. Unlike other manufacturers who produce many unrelated products, YOFC is vertically integrated and singularly focused on optical fibre and cable manufacturing. Its goal to be the most innovative, advanced and highest quality manufacturer of fibre optics in the world, is evidenced by its numerous global achievements and awards:

- In October 2019, YOFC won the prestigious ARE-QP Award, one of the most important quality awards in the world for quality management.
- At CEDIA EXPO 2019, YOFC's FIBBR Ultra 8K HDMI 2.1 received the prestigious CONNECTED DESIGN award for the world’s first 8K HDMI cable
- YOFC was the third optical fibre manufacturer to master G.654.E technology for large effective area (LEAF) ultra-low loss networks which are poised to replace legacy G.652.D backbone networks installed in the 1990’s and now approaching end of service life.
- YOFC’s advanced micro diameter, bend-insensitive fibre cables are currently in use in several of the world’s largest 5G deployments and it is on its way to becoming the leading supplier for many of the world’s most demanding 5G operators.

Trispec and YOFC stand behind the quality of everything supplied. Every drum of fibre delivered will be accompanied by a test report showing factory OTDR test results proving the integrity of the fibre cable.

In addition to rigorous quality control, each cable is meticulously crafted to optimize field installation with time & labour saving features such as high modulus plastic (flexible) buffer tubes, SZ stranding and rip cords for fast-access jacket removal.

YOFC is well known globally but just getting started in North America. Recently YOFC won major contracts in the USA for large service providers such as:

- Media Com: 5th largest cable tv service provider in the US
- Crown Castle: One of the largest smart city and small-cell operators in US
- Rural network providers such as Reynolds Fibre and others

Trispec is proud that ***YOFC has selected Trispec to introduce YOFC to the Canadian market.***
